

GREEN HOMES DESIGN SERVICES

GREEN HOMES DESIGN SERVICES

At Green Homes, we pride ourselves on innovation and excellence in sustainable home design. We have developed over 60 designs, each rated above 7 stars across all six climate zones in Australia. Among our achievements, we have designed and built the highest-rated and most efficient two-storey home in the country—a model of efficiency and innovative design.

Global Home of the Year

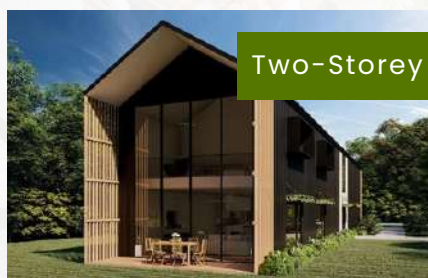

For areas without a licensed Green Homes builder, we offer comprehensive design services to ensure your home project starts on the right path. Trust Green Homes to bring your vision of an eco-friendly, efficient home to life.

At Green Homes, we prioritise designing homes that are efficient, sustainable, and healthy. Sustainability is a fundamental aspect of our designs, not just an add-on or an upgrade. We believe everyone should have the opportunity to live in a comfortable, low-energy, and healthy home.

It's important to us that nothing is left out, and we don't engage in practices that artificially lower your starting price only to increase it later during the build. At Green Homes, you'll find honest and transparent builders who have been in the industry since 2006.

With extensive experience building thousands of homes and winning multiple awards, including the prestigious Global Home of the Year, we aim to provide you with confidence and comfort in building with the right team. Partnering with Green Homes means choosing a builder dedicated to making a positive impact on the environment, your family, and your community.

CUSTOM DESIGNS BASED ON PRE-DESIGNED PLANS

We offer personalized design services tailored to your preferences using one of our pre-designs as a starting point. This approach allows for quicker turnaround times and ensures that your new home meets all regulatory requirements while still reflecting your unique tastes.

FULLY CUSTOM DESIGNS

If you have a specific vision in mind, our team can create a fully custom home design from scratch. We work closely with you to bring your dream home to life, ensuring every detail aligns with your lifestyle and aesthetic preferences.

ENERGY MODELLING FOR EFFICIENCY

Throughout the design process, we perform comprehensive energy modelling to ensure your home is optimized for energy efficiency. Our goal is to design homes that perform exceptionally well in your specific climate, helping you save on energy costs and reduce your environmental footprint.

Tailored Design Service Packages

As the demand for sustainable living increases, Green Homes offers a range of design services to meet various needs and budgets. Our tiered service structure ensures that every client, from those seeking basic green upgrades to those desiring comprehensive sustainable solutions, can find the right level of support.
